RE: Submission of Comprehensive District Mobility Study
Montrose Management District

It is with great anticipation that the District submits a copy of the recently completed comprehensive Mobility Study to this committee. The District felt compelled to investigate in detail existing conditions to Streets, Sidewalks, Parking, Crosswalks, ADA standard compliance, drainage and related infrastructure that impact mobility within its boundaries in the interest of impacting decisions on funding to address the needs. To that end, we and our consultants will make ourselves available to discuss the findings and help the city in setting its Traffic, Transportation and Infrastructure priorities as they relate to the Montrose area and are served by the district.

In short, the findings reveal a need to focus on

- Pruning vegetation in the district
- Pavement reconstruction on the six primary commercial corridors in the district
- Refreshing pavement markings to improve safety, particularly at cross walks.
- Improving ramps and sidewalks to increase pedestrian activity, with focus on ADA compliance
- Repairing medians
- Taking steps to increase general safety in the district
- Coordinate signal timings throughout the district.

We stand ready to assist with evaluation of these findings.
